Blue Cap
Foam
Effective Treatment for
Pediatric Atopic Dermatitis

Atopic dermatitis (AD) is the most common ***inflammatory skin disease*** in children, significantly affecting their quality of life. Traditional treatments often include corticosteroids, which can have side effects, prompting the search for non-steroidal alternatives.

Blue Cap Foam is a safe and effective choice for treating pediatric atopic dermatitis, significantly improving clinical signs and patient quality of life.

Why choose *Blue Cap Foam*

Quick and effective results

Significant symptom reduction from the first week of use.

Safe and well-tolerated

Minimal, transient side effects.

Improved quality of life

71.4% of patients saw great skin improvement.

Key *study data*

Reduction in clinical signs

Desquamation
73.2%

Erythema
69.6%

Pruritus
69.6%

Dry skin
64.3%

Lichenification
51,8%

Excoriations
46.5%

Infiltration
39.3%

Patient improvement assessments

**Side effects: Initial burning sensation in 3 patients, which resolved with continued use.*

Why ***doctors trust*** Blue Cap Foam

Non-steroidal alternative
Avoids corticosteroid side effects.

Easy application
Twice daily use with rapid results.

Safety
Only 3 patients reported mild burning, resolved with continued use.
